

Men: It's okay to talk about low testosterone.

Decreased sexual desire?

Feel fatigued?

Depressed mood?

What you're feeling could be related to low testosterone (hypogonadism).

Consider joining the **TRAVERSE research study** for men age 45 to 80 who have symptoms of low testosterone (hypogonadism) and have a history or risk of heart disease or stroke.

If you volunteer and qualify, your participation will last up to approximately 5 years. During that time, you'll receive testosterone replacement therapy or placebo in the form of a gel that you'll apply to your skin. Your health is very important to us, and will be monitored throughout the study.

If you qualify, you may potentially receive:

- Testosterone replacement therapy or placebo
- Study-required medical care from a study doctor

You also might be eligible for some compensation for participation.
