

Runny nose, cough, congestion, wheezing?

Learn about a clinical trial for RSV

Worried about RSV?

Contact a clinical trial site and get tested today at no cost to see if you qualify for the study

RSV can be a serious, life-threatening virus for high-risk adults who are 18 years or older and meet at least 1 of the following criteria:

- Moderate or severe COPD
- Asthma
- Chronic lung disease
- Chronic cardiovascular disease
- ≥60 years of age (vaccinated or nonvaccinated)

Why join an RSV clinical trial?

- Access to an investigational oral medication for RSV
- Limited treatment options for high-risk adults
- No FDA-approved oral treatment available
- Don't have to discontinue current medications to participate

It's important to get your RSV status confirmed quickly.

To be eligible for the study, you must be diagnosed with RSV and enrolled within 3 days of your symptoms starting.
