

IS A RECENT DIAGNOSIS WEIGHING ON YOUR MIND?

If you or a loved one has recently been diagnosed with one of these conditions, the Enlighten-Early Study may be able to help. The primary purpose of this study is to evaluate weight gain in people ages 16 to 40 with schizophrenia, schizophreniform, or bipolar I disorder who are taking an investigational medication compared to an approved treatment. **To learn more about this clinical research study, talk to your doctor today.**
